

COMMUNITY

## Climate Danger

### Plan ►

- What does 'change' mean to you?
- What can you see in your local community that is a human impact on the environment (good and bad), particularly things that can lead to climate change?
- Find a local environmental scientist to talk to you about anthropomorphic climate impacts
- What can you do to make the world a better place?
- Talk about the role of individuals, businesses and governments to help fix the problems you have identified
- Look at what energy sources your Scout Hall uses, and what you use on camp, and look into alternative and renewable energy sources

### Do ►

- Do a project in your local area that improves the state of the environment
- Make sure that the items that could be bad for the environment (chemicals etc.) in your Scout Group's storage room are labelled clearly
- Talk with an expert about what the effects of a changing climate would be to you
- Start a recycling program in your local area
- Work with your Group Support Committee on ways you can implement solar for hotwater or electricity, or sourcing accredited 100% Green Power to power your scout hall

### Review ►

- Reflect on all you have learnt, while outside in the bush
- Talk about ways you can improve environmental action in your local area
- Throw the Plan>Do>Review> ball around and talk about what you have learnt
- Talk about how climate change is not only a local issue but a global issue

**Share your experience with your peers and discuss how each of you might tackle this differently next time**
